

AI-Ready Advisor

Presenter Cheat Sheet — review in 1–3 hours, deliver tomorrow

THE 60-SECOND OPENER

1. **Welcome.** “You just answered 24 questions on your phones. The dashboard you’re about to see is the sum of all of you.”
2. **Anonymity.** “No names on this screen. Only totals and the distribution.”
3. **Reveal the collective dollar.** “This room is leaving **\$X million** on the table every year.”
4. **Tier mix.** “X% Low, Y% Mid, Z% High — you’re not alone in your tier.”
5. **Walk the four cards.** Score → Cost → Search Waste → Admin Waste.

WHAT’S ON SCREEN

4 Cards (the numbers): Readiness Score · Cost of Inaction · Search Waste · Admin Waste

6 Pillars (what drives the score): Strategy · Data · Process · People & Leadership · Technology · Security

MASTER MNEMONIC

S.D.P.P.T.S. — Strategy, Data, Process, People, Technology, Security. Say it as “Smart Decisions Power Profitable Tech Stacks.” — if you can recite this, you’ll never lose your place during the talk.

ONE THING TO REMEMBER ALL NIGHT

*The score is the **headline**. The pillar is the **action**. End every section by naming the pillar to fix first.*

Card 1

Readiness Score (1–100)

WHAT THE RESULT STANDS FOR

- **How prepared** your business is for AI to deliver real ROI — not a grade, a baseline.
- A composite of **6 dimensions** of business maturity (the pillars).
- A **relative position**: where you sit vs. peers in this room, not vs. a perfect ideal.
- A re-takeable benchmark — you re-score it quarterly to **see progress**.

WHY IT MATTERS

- **0–35 Low / 36–70 Mid / 71–100 High**. Most rooms cluster Low–Mid.
- It doesn't tell you what to do — the *pillar breakdown* does. The score is the start of the conversation.
- A Low score is **normal at the start**. A Low score 12 months from now is a problem.

HOW AI HELPS (general)

- Re-grade your maturity automatically every quarter and flag pillars that backslid.
- Benchmark your score against industry peers using public datasets.
- Generate a personalized **90-day roadmap** that prioritizes the lowest-scoring pillar.
- Suggest the single highest-leverage move based on which pillar dragged the score down.

REMEMBER THIS

SCORE = Snapshot + Compare + Repeat. Snapshot today · Compare to peers · Repeat in 90 days.

LINE TO SAY

“Your score is a snapshot. Your lowest pillar is the action. The number itself is just the headline.”

Card 2

Cost of Inaction

WHAT THE RESULT STANDS FOR

- What the room **loses every year** by keeping work manual — not a debt you owe, a leak that's ongoing.
- The **sum** of Search Waste + Admin Waste.
- A **meter**, not a verdict — every week of delay adds to it.
- The **minimum** value AI integration would unlock if you started today.

WHY IT MATTERS

- Most organizations **recover this investment in 4–9 months** — this is the line CFOs lean forward for.
- Even a fraction of this number, captured, beats most other ROI projects on your books.
- The dollar figure should make people uncomfortable. That's the point.

HOW AI HELPS (general)

- Inventory every manual workflow in your business and tag each for AI-replaceability.
- Rank automation opportunities by ROI so you know which to attack first.
- Track hours-saved and dollars-saved as each automation goes live — turn the estimate into a *verified* number.
- Forecast what the meter looks like 6, 12, and 24 months out under different action plans.

REMEMBER THIS

LEAK = Lost Every Annual Knowledge-Hour. It's a leak in the bucket — AI is the patch.

LINE TO SAY

"This isn't money you've lost. It's money you will lose every year until something changes. The meter is running."

Card 3

Annual Search Waste

WHAT THE RESULT STANDS FOR

- The **hidden tax** on every knowledge worker: time spent *looking*, not *doing*.
- Files, emails, the right version of the doc, the answer someone gave in Slack 6 months ago.
- Calculated as ~42% of total manual hours — the recoverable share that's pure search and re-entry.
- The **single highest-ROI AI project** for most businesses.

WHY IT MATTERS

- AI-powered internal search **cuts this by 70–90%** — that's industry data, not marketing copy.
- McKinsey: knowledge workers spend ~1.8 hours/day searching. That's nearly a quarter of every workday.
- Killing search waste requires **no behavior change** from staff — they just stop searching.

HOW AI HELPS (general)

- Become a **second brain** — answers any question from your docs, emails, drives, CRM in one prompt.
- **Surface** the right file *before* someone asks (proactive retrieval).
- **Summarize** long documents and email threads to seconds of reading.
- **Pull** information across multiple systems with one plain-English query.

REMEMBER THIS

HUNT = Hours Used Not on Tasks. Your team is hunting, not doing. AI ends the hunt.

LINE TO SAY

"Your team isn't doing the work — they're looking for the things they need to do the work. AI ends the hunt."

Card 4

Executive Admin Waste

WHAT THE RESULT STANDS FOR

- The **leadership tax**: time the owner / executive loses to clerical work.
- Scheduling, email triage, status reports, board prep, calendar Tetris.
- Counted as **100% recoverable** — no 42% discount — because automating an executive's clerical hour frees the *highest-value hour* in the company.
- Usually understated: the dollar figure caps at \$200/hr, but executive **opportunity cost** is far higher.

WHY IT MATTERS

- AI assistants reclaim **5–15 hours/week per leader** — that's a full workday returned.
- Every hour the CEO spends on scheduling is an hour *not* spent closing deals or steering strategy.
- Usually the highest **ROI-per-dollar** of any AI investment.

HOW AI HELPS (general)

- Manage calendars and meetings (find slots, auto-reschedule, batch focus time).
- Triage email — auto-categorize, summarize threads, draft replies in your voice.
- Take meeting notes and turn them into action items, recaps, follow-ups.
- Draft reports, board decks, and weekly briefings from your CRM and KPIs automatically.

REMEMBER THIS

TAX = Time Admin Executives owe. Every leader pays it. AI gets it refunded.

LINE TO SAY

"Every hour the CEO spends on scheduling is an hour not spent closing deals. This number undersells the real cost."

Pillar 1 Strategy

WHAT THE RESULT STANDS FOR

- Whether AI has a **home** in your org — an owner, a plan, a budget.
- The difference between “we use ChatGPT” and “we have an AI strategy.”
- Whether you’re moving with **intent** or just reacting to news headlines.
- Sources of the score: AI Adoption Level · Competitive Concern · AI Ownership.

WHY IT MATTERS

- **AI Ownership is the single best predictor** of 12-month ROI — better than budget, headcount, or industry.
- Companies without a designated AI lead almost always stall after 90 days.
- Strategy without ownership is a Pinterest board.

HOW AI HELPS (general)

- Act as a **strategic thinking partner** — pressure-test your OKRs and AI roadmap.
- Score every new tool/vendor against your goals so you don’t chase shiny objects.
- Track quarterly maturity progress and surface regressions before they compound.
- Monitor competitors’ AI announcements and translate them into your context.

REMEMBER THIS

OWN it — Owner, Written plan, Ninety-day milestone.

LINE TO SAY

“AI without an owner is a hobby. Pick a person, give them a budget, give them 90 days. That’s the strategy.”

Pillar 2

Data

WHAT THE RESULT STANDS FOR

- Whether your data is **AI-readable** — findable, clean, in one place.
- Where your data lives (paper? local drives? scattered? cloud?) and who can find it.
- The **foundation** that determines what AI can actually do for you.
- Sources of the score: Search Time · Data Cleanliness · Workflow Stalls.

WHY IT MATTERS

- **AI is only as smart as the data you let it see.** Bad data in = bad answers out.
- If your data is in “chaos / paper / various locations,” AI cannot help you yet.
- Data is usually the **first investment** a low-score company needs — before tools, before licenses, before anything.

HOW AI HELPS (general)

- Index every document you own — PDFs, decks, emails, drives — into one searchable layer.
- Pull from any system in plain English (CRM, ERP, email, files) without writing code.
- Spot data quality issues automatically (duplicates, gaps, conflicts) before they reach a model.
- Centralize knowledge without rebuilding your databases — AI sits *on top* of what you have.

REMEMBER THIS

3 C's: Centralize, Clean, Connect. Where it lives · Whether it's usable · Whether systems share it.

LINE TO SAY

“AI is only as smart as the data you let it see. Step one isn't the model — it's the pipeline.”

Pillar 3

Process (SOP)

WHAT THE RESULT STANDS FOR

- Whether your business is **documented and repeatable**.
- How fast you respond to customers — the visible side of internal process maturity.
- The **handoff points** where AI can replace human delay (lead response, ticket routing, approvals).
- Sources of the score: Response Velocity · Process Documentation (SOPs).

WHY IT MATTERS

- AI automates *processes*. **Without SOPs there's nothing to automate.**
- Slow prospect-response is the #1 silent killer of small-business sales — AI fixes this fastest.
- Process maturity = how portable your business is when you scale, hire, or sell.

HOW AI HELPS (general)

- **Watch** how work gets done and auto-generate the SOP — no manual writing.
- Convert documented workflows into **automations** that run 24/7 without staff.
- Onboard new employees by replaying SOPs with an AI guide that answers questions in context.
- Cut prospect / customer response time from **hours to seconds** with AI-drafted replies.

REMEMBER THIS

DAR — Document it · Automate it · Repeat it. If you can't DAR it, AI can't scale it.

LINE TO SAY

"If you can't draw the process on a whiteboard, you can't automate it. Document first — we'll automate fast."

Pillar 4

People & Leadership

WHAT THE RESULT STANDS FOR

- Whether your team will **actually use** AI when you give it to them.
- Whether you have **rules** for safe use (an Acceptable Use Policy).
- How willing leadership is to **invest** when ROI is proven.
- Sources of the score: Team Sentiment · AI Use Policy · Budget Willingness.

WHY IT MATTERS

- **AI doesn't fail because the tech doesn't work.** It fails because the team doesn't use it.
- “Fearful” or “Skeptical” teams will sabotage rollouts — even passively.
- Without a written AI policy, you have **shadow-AI risk** — employees leaking data into free tools.

HOW AI HELPS (general)

- Train your team through **interactive AI coaches** in their workflow (in Slack, email, browser).
- Generate a policy template tailored to your industry, size, and risk profile — one-page, plain English.
- Track adoption across roles and surface who's leading vs. who needs help.
- Identify resistant employees early and propose specific 1:1 interventions or pairing.

REMEMBER THIS

PACE — Policy · Adoption · Champions · Education.

LINE TO SAY

“AI doesn't fail because the tech doesn't work. It fails because the team doesn't use it. Train the team first.”

Pillar 5

Technology

WHAT THE RESULT STANDS FOR

- Whether your systems can **share data** with AI (or with each other).
- The **plumbing** that enables AI to act across CRM, email, ERP, drive, calendar.
- How many tools you're paying for that **AI could consolidate**.
- Sources of the score: System Integration · Data Location · Tool Fatigue.

WHY IT MATTERS

- AI needs your systems to **talk**. If they don't, integration time can dwarf the cost of AI itself.
- Tool sprawl is often the inverse risk: too many apps, not too few. AI consolidates — it doesn't add to the pile.
- Cloud-stored data is AI-ready. Local-drive data isn't.

HOW AI HELPS (general)

- **Talk to every system** without custom code — one prompt, multiple tools, one answer.
- Become the **one front door** for the whole stack (Slack or Teams as the unified interface).
- Surface duplicate tools and overlap automatically; recommend what to cut.
- Migrate workflows from legacy systems by mapping inputs and outputs instead of rewriting.

REMEMBER THIS

PIPE — Plumbing · Integration · Places (cloud vs local) · Excess tools.

LINE TO SAY

"AI needs your systems to talk. If they don't, we fix the plumbing first — then we add the brain."

Pillar 6

Security

WHAT THE RESULT STANDS FOR

- Whether your AI use is **safe and compliant** — not blocking AI, but governing it.
- How exposed you are to **shadow AI**: employees pasting client data into free ChatGPT.
- Your readiness for regulated-industry requirements (HIPAA, FINRA, SOC2, GDPR).
- Sources of the score: Shadow-AI Risk · Access Revocation · Regulated Industry.

WHY IT MATTERS

- Shadow AI is a **breach waiting to happen** — and the average leader has no idea it's already happening.
- If you can't instantly revoke ex-employee access, every offboarding is a data-leak risk.
- Regulated industries that use consumer AI tools are one audit away from a fine.

HOW AI HELPS (general)

- **Detect** when someone tries to paste sensitive data into a chat and block it before it leaves your network.
- Auto-revoke AI tool access the moment HR triggers an offboarding — no manual cleanup.
- Maintain prompt and response audit logs for compliance review and incident investigation.
- Apply **enterprise guardrails** without slowing daily usage — safety is invisible when it's done right.

REMEMBER THIS

LOCK — Logging · Oversight · Compliance · Kill-switch (access).

LINE TO SAY

"If you can't name the AI tools your team is using right now, you have a security problem. Step one is visibility."

Closing

THE ASK

Same destination for every tier: book the **Full 35-Point Diagnostic** (free with FreedomForge AI membership).

Different reasons:

- **Low:** build a foundation.
- **Mid:** turn pieces into a plan.
- **High:** find your remaining gaps.

MEMORY SPINE OF THE TALK

S.D.P.P.T.S. — Strategy, Data, Process, People, Technology, Security.

4 Cards: Score → Cost → Search → Admin.

1 Rule: The score is the headline; the pillar is the action.

THE CLOSING LINE

*This room is leaving **\$X million** on the table every year. The score is a snapshot. The Full 35-Point Diagnostic turns it into a plan — for each of you individually. **The room number is the headline. Your number is the action.***
