

FreedomForge AI

"AI-Ready Advisor" Assessment Breakdown

A plain-English walkthrough of every question, every answer option, the formulas behind the score, and what the results mean. Simple enough for a fifth grader; substantive enough for executives and investors.

The Advisor is a **multi-page wizard**. Each page asks a small group of related questions; you click **Next**, and after the last page submits, the **Results Page** shows your AI Readiness Score and dollar figures. All seven questions are **open-ended** (free text or numeric input — no dropdowns or multiple choice).

Section 1 — Every Page, Every Question, Every Possible Answer

Page 1 — "Start your FREE Eval" (Contact info)

Q1	Full name
Type	Open-ended text
Helper	—
Accepted	Any name

Q2	Company name
Type	Open-ended text
Helper	—
Accepted	Any company or DBA

Q3	Email
Type	Open-ended text
Helper	—
Accepted	Any valid email address

→ Click **Next**

Page 2 — "Your Financial Profile" (Business metrics)

Q4	What is your total company headcount?
Type	Open-ended number
Helper	Includes admin, operations, management, and yourself
Accepted	Any whole number (e.g., 1, 5, 25, 250)

Q5	On average, how many hours per week does one staff member spend on manual, repetitive tasks?
Type	Open-ended number
Helper	Think: manual data entry, drafting emails, updating spreadsheets, or redundant reporting
Accepted	Any hours/week (e.g., 5, 15, 40)

Q6	As a leader, how many hours per week do YOU personally spend on administrative tasks or internal reporting?
Type	Open-ended number
Helper	Time spent managing data rather than making strategic decisions
Accepted	Any hours/week (e.g., 3, 8, 15)

Q7	What is the blended average hourly rate of your team? ("Avg Hourly Rate")
Type	Open-ended number
Helper	—
Accepted	Any dollars per hour (e.g., \$25, \$50, \$120)

→ Click **Next** → form submits → **Results Page** loads

Results Page (outputs only)

The page returns four values and a recommendation:

- **AI Readiness Score** (percentage, e.g., 62%)
- **Annual Search Waste** (dollars/year)
- **Executive Admin Waste** (dollars/year)
- **Annual Cost of Inaction / "Cost of Waiting"** (dollars/year)

Section 2 — Purpose & What the Results Mean

Think of the Advisor as a small machine with three dials: **how big you are** (headcount), **how much busywork you carry** (staff hours + leader hours), and **what it costs** (hourly rate). The machine multiplies the dials, applies one industry assumption, and prints a dollar figure.

Purpose of each question

Page 1 — Contact

- **1. Full name** — Identifies who is submitting so FFAI can follow up personally.
- **2. Company name** — Anchors the report to a specific business and lets FFAI look up industry context before a call.
- **3. Email** — How the personalized Readiness Report is delivered.

Page 2 — Financial Profile

- **4. Headcount** — Sets the *scale*. Every hours-saved figure later is multiplied by this number.
- **5. Staff manual hours/week** — The **savings pool** — the raw inventory of work AI can absorb (data entry, copy-paste reporting, drafting routine emails). The single most important input.
- **6. Leader admin hours/week** — Captures the *leadership tax* — time the owner/executive loses to clerical work instead of strategy. Tracked

separately because leader hours are worth more than line-staff hours.

- **7. Blended hourly rate** — Converts hours into dollars. Without this, the tool can only show time saved; with it, it can show real cost.

The formulas the Advisor actually uses

Pulled directly from the page's JavaScript — these are the live calculations.

$$\text{Annual Search Waste} = \text{Headcount} \times \text{Staff Hours} \times \text{Hourly Rate} \times 52 \text{ weeks} \times \mathbf{0.42}$$

The 0.42 is the tool's built-in assumption that ~42% of manual hours are pure recoverable waste — time spent searching, re-entering, and reconciling data that AI can eliminate.

$$\text{Executive Admin Waste} = \text{Leader Admin Hours} \times \text{Hourly Rate} \times 52 \text{ weeks}$$

No 0.42 discount here — leadership admin is treated as 100% recoverable, because automating it frees the highest-value hour in the company.

$$\text{Annual Cost of Inaction} = \text{Annual Search Waste} + \text{Executive Admin Waste}$$

Also called the "Cost of Waiting" on the result page.

$$\text{AI Readiness Score (\%)} = \text{A weighted percentage produced server-side, scaled against the four inputs combined with business size.}$$

Higher score = larger savings pool, larger team, higher hourly rate.

What each result *means* in practice

- **High Readiness Score + large Cost of Inaction** — Many manual hours, mid-to-high hourly rate, growing headcount. *Reading:* "You are losing significant money to repetitive work today. AI integration pays back quickly." Steered toward FFAI's paid **AI Integration Services**.
- **Moderate score + large Executive Admin Waste** — Smaller team, but the owner is buried in reporting. *Reading:* "The bottleneck is at the top. Automating leadership's admin frees the most valuable hour in the company." Steered toward focused leader-tools first (dashboards, reporting agents).
- **Low score + small Cost of Inaction** — Small team, low hours, low rate. *Reading:* "AI will help, but the financial case is modest right now. Start with low-cost tools and revisit as you scale." Pointed at free resources (36-Point Idea Eval, Tool Garage).

Why the design is smart

- **Few questions, high signal.** Seven inputs is the minimum to compute a credible dollar figure. Splitting them across two pages keeps each step short and the completion rate high.
- **Sells urgency, not fear.** Framing the output as "Cost of Waiting" turns a static ROI number into a per-week, per-month *meter* — every week a prospect delays, the meter ticks up.
- **The 42% assumption is defensible.** Industry studies repeatedly find 30–50% of

knowledge-worker time is consumed by searching, re-entry, and reconciliation; 42% sits in the middle — aggressive enough to motivate action without being implausible.

- **Segments leads automatically.** The same form quietly sorts respondents into "ready to buy integration," "needs leader tools," and "nurture with free content" — without the prospect feeling sorted.
- **Honest about scope.** Self-reported inputs produce a directional estimate, not an audit. That sets up the deeper paid **200-Point Business Evaluation** as the natural next step.

Bottom line

The AI-Ready Advisor is a two-page, seven-question ROAI calculator disguised as a readiness quiz. It answers one question for the user — *"Is the money I'm losing to manual work bigger than the cost of fixing it?"* — and one for FreedomForge AI — *"Is this lead worth a consultation today, a nurture sequence, or a free tool?"* Both sides get a fast, fair answer from the same seven numbers.
