

AI-Ready Advisor

Presenter Cheat Sheet — one card per page

THE 60-SECOND OPENER

1. **Welcome the room.** “You just answered 24 questions on your phones. The dashboard you’re about to see is the sum of all of you.”
2. **Promise anonymity.** “No names on this screen. Only totals and the distribution.”
3. **Reveal the collective dollar.** “This room is leaving **\$X million** on the table every year.”
4. **Show the tier mix.** “X% Low, Y% Mid, Z% High — you’re not alone in your tier.”
5. **Walk the four cards in order.** Score → Cost → Search Waste → Admin Waste.

THE 4 CARDS & 6 PILLARS YOU’LL COVER

Cards: **Readiness Score / Cost of Inaction / Search Waste / Admin Waste**

Pillars (drive the score): **Strategy / Data / Process / People & Leadership / Technology / Security**

ONE THING TO REMEMBER

*The score is the headline. The pillar is the action.
End every section by naming the pillar to fix first.*

Card 1

Readiness Score

HOW THE SCORE IS BUILT

Sum of weighted answers across 6 pillars (each option = 1–4 or 1–5 points), normalized to a 1–100 %.

WHAT IT MEANS

An average across the room. Distribution matters more than the average: **0–35 Low, 36–70 Mid, 71–100 High**. Most rooms cluster in Low/Mid.

HOW AI FIXES IT

- **Score-tracking dashboard:** Notion / Airtable + a Claude agent that auto-grades quarterly re-takes.
- **Maturity model alignment:** map your score to *Gartner's AI Maturity* or *MIT's AI Index* — gives an outside benchmark.
- **Action sequencer:** a custom GPT/Claude that ingests the 6 pillar scores and outputs a 90-day plan (lowest pillar first).

LINE TO SAY

"Your score is a snapshot. Your lowest pillar is the action. We'll get to the action in a moment."

Card 2

Cost of Inaction

HOW THE SCORE IS BUILT

Search Waste + Admin Waste. Built from the headcount, hours, and hourly-rate you entered in Step 1.

WHAT IT MEANS

What the room loses every year by doing nothing. Most orgs recover this in **4–9 months** after implementing AI — quote that number.

HOW AI FIXES IT

- **Workflow audit pipeline:** Scribe or Tango to record every manual workflow → Claude/GPT to score each for AI-replaceability → ranked backlog.
- **Automation platforms:** n8n, Make, Zapier, Power Automate — pick one, run 3 small automations in 30 days.
- **Outcome tracking:** a Looker / Metabase board that logs hours-saved per automation, so the \$ figure becomes *verified*, not estimated.

LINE TO SAY

“This isn’t money you’ve already lost. It’s money you will lose each year until something changes.”

Card 3

Annual Search Waste

HOW THE SCORE IS BUILT

Headcount × staff manual hours/wk × hourly rate × 52 weeks × **0.42**. The 0.42 = ~42% of manual time is recoverable searching/re-entry.

WHAT IT MEANS

Time your team burns hunting for files, emails, the last version of a doc, the answer in Slack. Enterprise RAG **cuts this 70–90%**.

HOW AI FIXES IT

- **Internal search / RAG:** Glean, Notion AI Q&A, Microsoft Copilot Search, Slack AI — off-the-shelf wins for most SMBs.
- **Custom RAG pipeline:** Unstructured.io → OpenAI/Claude embeddings → Pinecone/Weaviate/Qdrant → Claude Sonnet for answers. Works when your data is mixed (PDFs, emails, drives, CRM).
- **Inbox & doc summarizers:** Superhuman AI, Shortwave, Gemini in Workspace — recover 30–60 minutes/person/day immediately.

LINE TO SAY

“Your team isn’t doing the work. They’re looking for the things they need to do the work. AI ends the hunt.”

Card 4

Executive Admin Waste

HOW THE SCORE IS BUILT

Leader admin hours/wk $\times$ hourly rate $\times$ 52. **No 0.42 discount** — leader hours are treated as 100% recoverable.

WHAT IT MEANS

The leadership tax: scheduling, email triage, status reports, board prep. AI assistants reclaim **5–15 hours/week per leader**.

HOW AI FIXES IT

- **Calendar & scheduling:** Reclaim.ai, Motion, Clockwise, Cal.com AI.
- **Email triage:** Superhuman AI, Shortwave, Sanebox AI — auto-categorize, summarize, draft replies.
- **Meeting notes & recaps:** Granola, Fathom, Otter, Read.ai — transcript $\rightarrow$ action items $\rightarrow$ auto-emailed.
- **Executive briefing agent:** a Claude Project pre-loaded with the leader's CRM/KPI exports that drafts a Monday-morning briefing in 30 seconds.

LINE TO SAY

"Every hour the CEO spends on scheduling is an hour not spent closing deals. This number undersells the real cost."

Pillar 1 Strategy

HOW THE SCORE IS BUILT

3 questions: AI Adoption Level, Competitive Concern, AI Ownership. Low if no one owns AI or you're just 'experimenting'.

WHAT IT MEANS

Reveals whether AI use is *ad-hoc* or *strategic*. Companies without an AI owner rarely capture ROI.

HOW AI FIXES IT

- **Appoint an AI lead** (full-time or fractional) — the single best predictor of AI ROI in 12 months.
- **Quarterly maturity review:** re-take this assessment every 90 days; a Claude agent compares scores and flags regressions.
- **Strategy GPT:** a custom GPT/Claude Project loaded with your company OKRs that scores every new AI tool/vendor against your goals.

Tools to name: **OpenAI Enterprise, Claude for Work, Microsoft Copilot, Gartner AI Maturity Model**

LINE TO SAY

“AI without an owner is a hobby. Pick a person, give them a budget, give them 90 days. That’s the strategy.”

Pillar 2

Data

HOW THE SCORE IS BUILT

3 questions: Search Time, Data Cleanliness, Workflow Stalls. Low if data is in 'Chaos / Paper / Various Locations'.

WHAT IT MEANS

AI can only act on data it can read. **Centralized + Cloud = ready**. Anything else = clean first, automate second.

HOW AI FIXES IT

- **Centralize:** Snowflake, BigQuery, or Databricks for structured; Google Drive / SharePoint with permissions for unstructured.
- **Ingest:** Fivetran or Airbyte to pipe SaaS apps into the warehouse; Unstructured.io for PDFs/emails/decks.
- **Index for AI:** embed into Pinecone/Weaviate/Qdrant; query via Claude or GPT-4o with RAG.
- **Data quality:** Great Expectations or Monte Carlo to catch broken data before AI eats it.

LINE TO SAY

"AI is only as smart as the data you let it see. Step one isn't the model — it's the pipeline."

Pillar 3

Process (SOP)

HOW THE SCORE IS BUILT

2 questions: Response Velocity, Process Documentation. Low if SOPs are 'None / Not Many' or response time is 24+ hrs.

WHAT IT MEANS

AI automates *processes*. Without SOPs there's nothing to automate. Slow prospect-response = lost deals.

HOW AI FIXES IT

- **Document SOPs automatically:** Scribe, Tango, or Guidde watch screens & generate step-by-step guides; Claude rewrites them into clean prose.
- **Prospect-response automation:** Intercom Fin, Drift, or a custom Claude agent that drafts personalized replies in **under 60 seconds** using prior-conversation context.
- **Workflow runner:** n8n or Make to chain steps — e.g. new lead → enrich via Clearbit → Claude drafts email → sent + logged in HubSpot.
- **SOP-aware agents:** upload your SOP library into Claude Projects so any new employee (or AI) follows the standard from day one.

LINE TO SAY

"If you can't draw the process on a whiteboard, you can't automate it. Document first — we'll automate fast."

Pillar 4

People & Leadership

HOW THE SCORE IS BUILT

3 questions: Team Sentiment, AI Use Policy, Budget Willingness. Low if team is 'Fearful/Skeptical' or there's no written policy.

WHAT IT MEANS

Tests *cultural readiness*. Fearful teams resist; enthusiastic teams champion. Without an Acceptable Use Policy, you have shadow-AI risk.

HOW AI FIXES IT

- **Team enablement:** ChatGPT Enterprise, Claude for Work, or Microsoft Copilot licenses for every employee — with usage logging so you can see adoption.
- **AI Acceptable Use Policy template:** 1-page document covering allowed tools, data classes, prompt logging, and escalation. Anthropic, OpenAI, and SHRM all publish free templates.
- **Training pipeline:** 4-hour workshop → weekly 'AI Lunch' demos → an internal Slack channel where wins get shared.
- **Champion program:** identify 3–5 power users; give them prompt libraries; let them teach the rest.

LINE TO SAY

"AI doesn't fail because the tech doesn't work. It fails because the team doesn't use it. Train the team first."

Pillar 5

Technology

HOW THE SCORE IS BUILT

3 questions: System Integration (CRM/Email/ERP), Data Location, Tool Fatigue. Low if systems are siloed, data is on local drives, or the team is 'Overwhelmed'.

WHAT IT MEANS

Tests the *plumbing*. AI delivers most value when data flows between systems. Siloed = friction. Tool sprawl = consolidation, not addition.

HOW AI FIXES IT

- **iPaaS for system integration:** Workato, MuleSoft, Boomi, or n8n for SMB — connects CRM ↔ Email ↔ ERP so AI can act across all of them.
- **Cloud migration:** move file shares to Google Drive / SharePoint / Dropbox Business; move databases to Snowflake / BigQuery.
- **Tool audit:** Cledara or Vendr to map every SaaS subscription; cut overlap; surface what AI can consolidate.
- **Unified agent layer:** Slack as the front door — one Claude/GPT agent that queries Salesforce, NetSuite, and Gmail in one prompt.

LINE TO SAY

"AI needs your systems to talk. If they don't, we fix the plumbing first — then we add the brain."

Pillar 6

Security

HOW THE SCORE IS BUILT

3 questions: Shadow-AI Risk, Access Revocation, Regulated Industry. Low if employees paste client data into free ChatGPT, or you can't revoke ex-employee access.

WHAT IT MEANS

Tests *governance and risk*. Shadow-AI is a breach waiting to happen. Regulated industries (HIPAA, FINRA, SOC2) need enterprise-grade AI, not consumer tools.

HOW AI FIXES IT

- **Enterprise AI with zero training:** Claude for Work, ChatGPT Enterprise, Azure OpenAI — your data is not used to train models; SOC2/HIPAA available.
- **AI gateways & DLP:** Cloudflare AI Gateway, Lakera, PromptArmor — block sensitive data in prompts before it leaves your network.
- **Identity & access:** Okta or Microsoft Entra for SSO + auto-deprovisioning — ex-employee loses every AI tool the moment HR clicks 'offboard'.
- **Audit logs:** turn on prompt-logging in your AI platform; export to your SIEM (Splunk, Datadog) for compliance review.

LINE TO SAY

"If you can't name the AI tools your team is using right now, you have a security problem. Step one

is visibility."

Closing

THE ASK

For everyone, regardless of tier: book the **Full 35-Point Diagnostic** (free with FreedomForge AI membership). Same destination, different reasons:

- **Low:** build a foundation.
- **Mid:** turn pieces into a plan.
- **High:** find your remaining gaps.

THE CLOSING LINE

*This room is leaving **\$X million** on the table every year. The score is a snapshot. The Full 35-Point Diagnostic turns it into a plan — for each of you individually. **The room number is the headline. Your number is the action.***
