

AI-Ready Advisor

Result Card Pop-Up Blurbs

Four blurbs — one per result card — designed to appear in a pop-up when a viewer clicks each data point on the live dashboard. Each blurb is 3–5 short bullets (~50–80 words): short enough to read at a glance, long enough to land. Same content as the Markdown file in this repo.

HOW TO USE ON STAGE

1. Read the bullets aloud verbatim — the audience reads the same text in the pop-up. Repetition cements meaning.
2. Then say one line of your own to connect it to the room (use the “LINE TO SAY” from the cheat sheet).
3. Close each card with the same sentence: *“The score is the headline. The pillar is the action.”*

Card 1

Readiness Score (1–100)

WHAT TO SHOW IN THE POP-UP

- Your business's overall preparedness for AI to deliver real ROI — a **baseline**, not a grade.
- A composite of **six pillars**: Strategy, Data, Process, People & Leadership, Technology, Security.
- **0–35 Low** (starting line) · **36–70 Mid** (building) · **71–100 High** (advanced).
- The **score is the headline**; your lowest pillar is the action.
- Most organizations score Low–Mid on the first take. That's normal — and it's the point of the diagnostic.

Card 2

Annual Cost of Inaction

WHAT TO SHOW IN THE POP-UP

- The dollars your business loses **every year** by keeping work manual.
- Calculated as **Search Waste + Admin Waste** from the headcount, hours, and hourly rate you entered.
- A **meter, not a debt** — every week of delay, this number ticks up.
- Most organizations **recover this investment in 4–9 months** after implementing AI.
- The minimum value AI integration would unlock starting today.

Card 3

Annual Search Waste

WHAT TO SHOW IN THE POP-UP

- Time and money lost when your team hunts for files, emails, docs, and answers.
- About **42% of manual work** is recoverable search and re-entry time.
- McKinsey: knowledge workers spend roughly **1.8 hours every day** searching — a quarter of every workday.
- AI-powered internal search (RAG) typically **cuts this by 70–90%**.
- Usually the **single highest-ROI AI project** for any business — and it requires no behavior change from staff.

Card 4

Executive Admin Waste

WHAT TO SHOW IN THE POP-UP

- The annual cost of **leadership doing clerical work** — scheduling, email triage, status reports, board prep.
- Treated as **100% recoverable** (no discount) — automating an executive's hour frees the most valuable hour in the company.
- AI assistants typically reclaim **5–15 hours per week per leader**.
- The hourly rate caps at \$200 here, so this number **understates** the real opportunity cost.
- Often the **highest ROI per dollar** of any AI investment.

Closing reminder

The pop-up is the **audience's view** — brief, scannable. Your **speaker view** is the Presenter Cheat Sheet, with the acronyms (SCORE / LEAK / HUNT / TAX) and the line-to-say for each card.

*“The score is the headline. The pillar is the action.”
Say this after every card. It is the spine of the talk.*
