

FreedomForge AI

"AI-Ready Advisor" Assessment Breakdown

A walk-through of every page, every question, every answer option, the formulas behind the score, and what the result means. Simple enough for a fifth grader; substantive enough for executives and investors.

The Advisor is a **7-section wizard** followed by an instant **Results Page**. Each section shows the current step (e.g. "Strategy 2 of 7"). Sections 2–7 are multiple-choice radio questions; Section 1 collects financial-profile numbers used for dollar calculations.

Section 1 — Every Page, Every Question, Every Answer

STEP 1 of 7 — Financial Profile (Intake)

Q1	Full name
Type	Open-ended text
Helper	—
Accepted	Any name

Q2	Company name
Type	Open-ended text
Helper	—
Accepted	Any company or DBA

Q3	Email
Type	Open-ended email
Helper	—
Accepted	Any valid email address

Q4	What is your total company headcount?
Type	Number (max 100)
Helper	Includes admin, operations, management, and yourself
Accepted	1 – 100

Q5	On average, how many hours per week does one staff member spend on manual, repetitive tasks?
Type	Number (max 100)
Helper	Think: manual data entry, drafting emails, updating spreadsheets, or redundant reporting
Accepted	0 – 100

Q6	As a leader, how many hours per week do YOU personally spend on administrative tasks or internal reporting?
Type	Number (max 100)
Helper	Time spent managing data rather than making strategic decisions
Accepted	0 – 100

Q7	What is the blended average hourly rate of your team? ("Avg Hourly Rate")
Type	Dropdown
Helper	—
Accepted	\$20, \$30, \$40, \$50, \$60, \$70, \$80, \$90, \$100, \$110, \$120, \$130, \$140, \$150, \$175, \$200

STEP 2 of 7 — Strategy

Q8	AI Adoption Level How would you describe your company's current use of AI?
Options	• Not at all • Individual employees are experimenting • We are running a pilot project • Working towards a fully integrated growth strategy

Q9	Competitive Concern On a scale of 1–5, how concerned are you that competitors using AI could outpace you for business in the next 12 months?
Options	• Critical • High • Neutral • Low • Not at All

Q10	AI Ownership Who is currently responsible for leading your AI Integration?
Options	• No One • IT Vendor/Consultant • Department Heads • Dedicated AI Lead

STEP 3 of 7 — Data

Q11	Search Time Minutes per day a typical team member spends searching for info?
Options	• less than 15 mins • 15–30 mins • 30–60 min • 60+ mins

Q12	Data Cleanliness How "clean" is your data for an AI to read?
Options	• Chaos / Paper / Various Locations • Scattered / Siloed / individual computers • Centralized / Cloud / Servers
Q13	Workflow Stalls Frequency of work stopping while waiting on data/feedback?
Options	• Daily • Often • Sometimes • Rarely • Never

STEP 4 of 7 — Process (SOP)

Q14	Response Velocity Time for a personalized prospect response?
Options	• 24+ Hrs • Same Day • 2–4 hrs • Instantly

Q15	Process Documentation Are your core processes well documented (SOPs)?
Options	• None / Not Many • Varies by Position / Task • Mostly / position or process-based • Fully Standardized for all positions / processes

STEP 5 of 7 — People & Leadership

Q16	Team Sentiment How does your team feel about the integration of AI?
Options	• Fearful • Skeptical • Curious • Enthusiastic
Q17	AI Use Policy Do you have and enforce a written AI Acceptable Use Policy?
Options	• No • Yes
Q18	Budget Willingness Would you establish a dedicated AI budget if a 5x ROAI (Return on AI) was proven?
Options	• No • Probably • Yes

STEP 6 of 7 — Technology

Q19	System Integration How well do your CRM, Email, and ERP talk to each other?
Options	• Not at All • Manual / Siloed • Some APIs • Fully Integrated
Q20	Data Location Where is your primary company data stored?
Options	• Local Drives / Computers • Mixed / Servers • 100% Cloud
Q21	Tool Fatigue How frustrated is the team with the number of different tools they have to use?
Options	• Overwhelmed • High • Neutral • Low • Not at all

STEP 7 of 7 — Security

Q22	Shadow-AI Risk Are employees using free AI tools (like ChatGPT) with sensitive client or company data?
Options	• Yes • I don't know • No

Q23	Access Revocation Can you instantly revoke an ex-employee's access to 'Company AI' tools?
Options	• No • Yes

Q24	Regulated Industry Are you in a highly regulated industry (HIPAA, FINRA, SOC2, etc.)?
Options	• Yes • No

RESULTS PAGE — Outputs (no questions)

After Step 7, click **Get Your Instant Results**. The page returns:

- **Readiness Score (1–100)** — your overall AI-ready percentage with a tier message.
- **Annual Cost of Inaction (\$)** — dollars per year of not adopting AI.
- **Annual Search Waste (\$)** — dollars lost to employees hunting for info.

- **Executive Admin Waste (\$)** — dollars lost to leadership clerical work.
- Calls-to-action: *"The Internal Brain System – Get AI Now!"* and *"Get the Full 35-Point Diagnostic (Requires FREE Membership) – Let's Go."*

Section 2 — Purpose & What the Results Mean

The Advisor measures readiness across **seven pillars: Financial Profile, Strategy, Data, Process, People & Leadership, Technology, and Security**. Each pillar contributes to the Readiness Score; the financial-profile numbers also drive the dollar figures on the result page.

Purpose of each question

Every question on the form does specific work — either feeding a number into the dollar calculation, scoring a pillar of the Readiness Score, or quietly segmenting the lead. Below: **why each one is asked** and **what the answer reveals**.

Step 1 — Financial Profile (Intake)

- **Q1 — Full name.** Identifies who is submitting so FFAI can follow up personally and address the lead by name in the report.
- **Q2 — Company name.** Anchors the report to a specific business and lets FFAI look up *industry context* before any consultation, so the call can be tailored.
- **Q3 — Email.** Delivery channel for the personalized Readiness Report and the only way the tool can re-engage the prospect after the page closes.
- **Q4 — Total company headcount.** Sets the **scale** of every downstream calculation. Every hours-saved figure later in the report is multiplied

by this number — a 5-person shop and a 250-person org get very different recommendations.

- **Q5 — Staff manual hours / week.** The **savings pool**. Raw inventory of work AI can absorb (data entry, copy-paste reporting, drafting routine emails). This is the single most important number — it feeds directly into the Annual Search Waste formula.

- **Q6 — Leader admin hours / week.** Captures the **leadership tax** — time the owner/executive loses to clerical work instead of strategy. Tracked separately because leader hours are worth more: the Admin Waste formula treats them as 100% recoverable (no 42% discount).

- **Q7 — Avg Hourly Rate (dropdown).** Converts hours into dollars. Without this the tool can only show time saved; with it, time-saved becomes dollars-saved. Discretizing into 16 fixed brackets (\$20–\$200) keeps the math stable and avoids one outlier breaking the average.

Step 2 — Strategy

- **Q8 — AI Adoption Level.** Tells FFAI whether the prospect is *greenfield* ("Not at all") or already integrating. Greenfield leads need education + starter tools; integrating leads need optimization services. The four steps map directly to common AI-maturity models (experimentation → pilot → integration).

- **Q9 — Competitive Concern (1–5).** Measures **urgency**. A "Critical" answer combined with low readiness creates the sharpest pitch — pain plus fear of falling behind. "Not at All" answers get nurtured, not pushed.
- **Q10 — AI Ownership.** Reveals organizational maturity. "No One" or "IT Vendor/Consultant" predicts stalled rollouts; "Dedicated AI Lead" predicts success. This is the single best predictor of whether AI investment will translate to results.

Step 3 — Data

- **Q11 — Search Time (minutes/day).** Quantifies the most common hidden cost in any business — minute-by-minute information hunting. "60+ mins" is a flashing red light: massive recoverable waste. The answer reinforces the Search Waste dollar figure.
- **Q12 — Data Cleanliness.** AI can only act on data it can read. "Chaos/Paper/Various Locations" means nothing AI can integrate with today; "Centralized/Cloud/Servers" means ready for action. This determines whether the recommendation should be "clean your data first" or "let's automate now."
- **Q13 — Workflow Stalls.** Captures bottleneck **frequency**. Daily stalls = systemic friction that AI workflow agents can solve. Rarely = the business runs lean and AI is less urgent. Useful for sequencing recommendations.

Step 4 — Process (SOP)

- **Q14 — Response Velocity.** A proxy for sales effectiveness. "24+ Hrs" for a personalized prospect response = leads going cold. AI assistants can move this to "Same Day" or "Instantly" — one of the highest-ROI automations FFAI knows converts well.

- **Q15 — Process Documentation (SOPs).** AI automates processes — but only if there *is* a process. "None/Not Many" means the first step isn't AI, it's documentation. "Fully Standardized" means AI integration can begin immediately.

Step 5 — People & Leadership

- **Q16 — Team Sentiment.** Predicts adoption success. "Fearful" teams will resist; "Enthusiastic" teams will champion. Determines whether change-management services need to wrap the tech rollout.

- **Q17 — AI Acceptable Use Policy.** A simple yes/no governance check. "No" signals **shadow-AI risk** (employees using free tools without rules). "Yes" signals operational maturity.

- **Q18 — Budget Willingness (5x ROAI).** A **qualifying question disguised as a hypothetical**. "Yes" or "Probably" segments the lead toward paid services; "No" segments toward free content. The phrasing "*if a 5x ROAI was proven*" preempts price objections.

Step 6 — Technology

- **Q19 — System Integration (CRM / Email / ERP).** Measures the plumbing. Siloed systems =

AI insights can't flow between them; Fully Integrated = AI can act across the whole stack. Predicts implementation difficulty.

- **Q20 — Data Location.** Cloud-stored data is AI-ready; local-drive data is not. Also hints at the migration work needed before AI can run on the prospect's data.
- **Q21 — Tool Fatigue.** Captures the inverse risk — **too many** tools, not too few. "Overwhelmed" teams need AI consolidation, not more apps. Nudges FFAI's recommendation toward unification rather than addition.

Step 7 — Security

- **Q22 — Shadow-AI Risk.** "Yes" or "I don't know" is a major liability flag — employees pasting client data into ChatGPT is a breach waiting to happen. This question often shocks leaders and creates the strongest case for governed enterprise AI.
- **Q23 — Access Revocation.** Tests basic identity hygiene. "No" or "I don't know" predicts security gaps that compound when AI is added to the stack.
- **Q24 — Regulated Industry.** A **routing question.** "Yes" (HIPAA, FINRA, SOC2) flags the lead for compliance-grade services, not consumer-grade AI. Critical for FFAI to know up front — a healthcare lead gets a different solution than a marketing agency.

What each result metric means

Readiness Score (1–100)

A weighted percentage across all 7 pillars. Each radio option has a hidden numeric value (verified from the page source — e.g., "Not at all" = 1, top option = 4). The score combines those into a single number out of 100.

Tier message (example, low end): "Your current AI readiness is low — but that's common at the start. Focus first on clean data and basic training to unlock quick wins and avoid falling further behind." Higher scores trigger more aggressive, opportunity-focused messaging.

Annual Cost of Inaction (\$)

*"Estimated annual cost of **not** adopting AI tools and workflows. Includes lost productivity from manual repetition and delays — most organizations recover this investment in 4–9 months after implementation."*

Formula (from page JavaScript): Annual Search Waste + Executive Admin Waste. Framed as the "**Cost of Waiting**" — a meter that ticks up every week the prospect delays.

Annual Search Waste (\$)

"Annual time & money lost when employees search for files, emails, docs, or answers. AI-powered internal search (e.g. enterprise RAG) typically reduces this waste by 70–90%."

Formula: Headcount × Staff Manual Hours × Hourly Rate × 52 weeks × **0.42**. The 0.42 is the tool's assumption that ~42% of manual work is pure

recoverable waste — searching, re-entering, and reconciling data.

Executive Admin Waste (\$)

"Time executives spend on routine admin (scheduling, email triage, report formatting). AI assistants can reclaim 5–15 hours/week per leader for strategic work."

Formula: Leader Admin Hours × Hourly Rate × 52 weeks. No 0.42 discount — leader admin is treated as 100% recoverable, because automating it frees the highest-value hour in the company.

Reading the combined result

- **High Readiness + large Cost of Inaction** — Many manual hours, mid-to-high hourly rate, growing headcount, mature pillars. *Reading:* "AI integration pays back quickly." Steered toward FFAI's paid **AI Integration Services** and the **Full 35-Point Diagnostic**.
- **Moderate Readiness + large Executive Admin Waste** — Owner-buried small team. *Reading:* "The bottleneck is at the top." Steered toward **leader-tools** first (dashboards, reporting agents, executive assistants).
- **Low Readiness + small Cost of Inaction** — Small team, low hours, low rate, low-maturity pillars. *Reading:* "The financial case is modest right now." Pointed at **free resources** (the 36-Point Idea Eval, Tool Garage, basic AI training) — to nurture, not close.

Why this design is smart (for investors / owners)

- **Seven pillars, ~24 inputs.** Long enough to feel like a real diagnostic, short enough to finish. Each pillar is a recognized AI-readiness dimension; nothing is invented.
- **Lead segmentation is automatic.** The same form sorts respondents into "ready to buy integration," "needs leader tools," "nurture with free content," and "compliance-flagged" — without the prospect feeling sorted.
- **Urgency is built into the math.** Framing as "Cost of Waiting" turns a static ROI number into a per-week meter — every week delayed ticks the meter up.
- **The 42% search-waste constant is defensible.** Industry studies repeatedly find 30–50% of knowledge-worker time goes to searching, re-entering, and reconciling — 42% is the middle of that range.
- **Honest about scope.** Self-reported inputs produce a directional estimate, not an audit. The result page explicitly upsells the **Full 35-Point Diagnostic** as the deeper paid follow-on.
- **Security and regulation are first-class.** Most AI-readiness quizzes skip governance; FFAI's asks about shadow AI, ex-employee access, and HIPAA/FINRA/SOC2. That signals an enterprise-aware vendor, not a hype shop.

Bottom line

The AI-Ready Advisor is a **two-part instrument**: a financial-profile calculator (Step 1) and a seven-pillar diagnostic (Steps 2–7). Together they answer one question for the user — *"Is the money I'm losing to manual work bigger than the cost of fixing it?"* — and one for FreedomForge AI — *"Is this lead worth a consultation today, a nurture sequence, or a free tool?"* Both sides get a fast, fair answer from the same 24 inputs.
